EXCELLENCE | QUALITY | SAFE CARE

WHY ARE THEY POPULAR AND WHAT ARE THE BENEFITS?

Our skin and tissues go thin and loose with age, and lips tend to become thinner. Regular frowning and squinting can give you a sad and tired look which does not reflect the real you.

Injectable fillers are designed to fill out, smooth and plump those creases, restoring a more youthful, "refreshed" look. They are also very effective in enhancing narrow lips. We also offer deep fillers that are used to enhance cheeks and chin and are non-surgical alternatives to implants.

WHAT AREAS CAN BE TREATED EFFECTIVELY?

- Lip enhancement
- Lines around/on the lips
- Nose-to-mouth lines
- Other lines on the face
- Cheek enhancement
- Chin enhancement
- Filling of any depressed areas

WHAT ARE THE TREATMENTS?

- JUVEDERM
This comes in different forms for fine and deep wrinkles and lip enhancement.

Results with the above usually last between 4 to 6 months. For longer lasting effects of between 2 and 5 years, we also offer:

- RADIESSE
- AQUAMID
- BIOALKAMID
- HYDRAFIL
- TEOSYAL

Our practitioner will discuss which one will be most effective for you when you attend a consultation.

WHAT DO THE PROCEDURES USUALLY INVOLVE?

A mild anaesthetic cream is applied to the area to be treated and left on for around 30 minutes. The filler is then injected using a very fine needle into the skin beneath the wrinkle. For lips, a dental block can be used if you prefer. Results are visible immediately. The filler dissolves naturally over a period of months.

WHAT ARE THE RISKS AND LIKELY AFTER-EFFECTS?

The fillers we use are non-toxic, non-allergenic products, which do not contain any animal ingredients. They have all been used safely on thousands of patients over many years.

Side-effects are minimal, though you should expect a little discomfort whilst being injected, and you may experience some short term bruising and swelling afterwards. If you wear make-up you should avoid doing so until the day afterwards.
